Project BloggyStories Requirements: Phase 2

1. Create a BloggyStories homepage that displays a welcome message.

2. Develop a website with Home and About pages.

3. The homepage should display all registered bloggers' enabled blog posts, including the category, blogger name, and date of each post.

4. Implement pagination and right-side filters using categories.

5. Add a "Create Account" button for new bloggers, with the ability to register using a Gmail account and the option to reset a forgotten password.

6. When creating an account, display two cards: one for a free account with basic features, and one for a paid account with basic and extra features.

7. Implement Stripe payment for the paid account at a later stage.

8. Once a user has successfully created an account, they should be able to create, manage, and view their blog, as well as enable or disable posts and edit their content.

Special Suggestion:

Use https://xdsoft.net/jodit/ instead of a third-party software.

Full Editor For Premium users & Markdown for free users

Include a simple markdown "Write Post" section, as demonstrated in this video: https://www.youtube.com/watch?v=1NrHkjlWVhM

Routes:

1. Home page: bloggystories.com

2. About page: bloggystories.com/about

3. Super admin: bloggystories.com/superadmin

4. Create new account: bloggystories.com/register

5. Login account: bloggystories.com/login

6. After login (as user1): bloggystories.com/user1

Super Admin Tasks:

1. User account management, including the ability to enable, disable, and delete users.

2. Approve or reject user blog posts with a message. (When a user creates or edits a blog, it should be sent to the Super Admin for approval. Only when the blog is approved by the Super Admin will the post be visible to the world.)

3. Handle basic errors, field validations, and alerts on the website.
